Lyme Cases with Out-of-State or Unknown Site of Exposure*

Imported Cases	19	28	15	26	20	16	12	15	151		
Unknown Exposure Cases	-	-	-	-	6	12	13	28	59		

*Only cases that meet the CDC case definition are included (<http://www.cdc.gov/ncidod/dvbid/lyme/casedef2.htm>). Cases with Vermont exposure (cases in which it has been determined that infection was likely acquired in Vermont) are noted by county of residence. The number of imported cases (cases in Vermont residents which were determined to have most likely been acquired out of state) are totalled for each year. Unknown cases (cases in which potential exposure could have been both in and out of Vermont) are totalled starting in 2003. Prior to 2003 these cases are included in the number of imported cases. Because the numbers of reported Lyme disease cases in Vermont are small, it is not possible to draw conclusions regarding the variations in the numbers from year to year.

Lyme Disease Cases in Northeastern States 1999 - 2005											
State	1999	2000	2001	2002	2003	2004	2005	Total		**Incidence 2005	
Connecticut	3,215	3,773	3,597	4,631	*1,403	1,348	1,810	17,967		51.6	
Maine	41	71	108	219	175	225	247	1,045		18.7	
Massachusetts	787	1,158	1,164	1,807	1,532	1,532	2,336	9,529		36.5	
New Hampshire	27	84	129	261	190	226	265	1,155		20.2	
New York	4,402	4,329	4,083	5,535	5,399	5,100	5,565	30,011		28.9	
Vermont	26	40	18	37	43	50	54	242		8.7	

* Drop in case #s in '03 is due to a change in the reporting system. Data is not comparable to '01,'02.

**Cases per 100,000 population
